Continuation of 13. Other: Response to Arguments:

Applicant's arguments filed on 6/30/06 have been fully considered, however they are not persuasive because of the following reasons:

Applicant's argued that Rosnow failed to teach or disclose an active QFD session component providing any kind of collaborative environment or common area. In response to Applicant's argument, the Patent Office maintained the rejection because Rosnow do teach an active QFD session component providing any kind of collaborative environment or common area (figure 7 & 8; page 1, paragraph 4; page 4, paragraph 41; page 6, paragraph 56; Rosnow teaches the method of providing the users the ability to develop, manage, and monitor business processes; Rosnow also discloses that the system of permit interactions between task members as well as enable electronic transmission and retrieval of task related documentation by task members and reviewers). Collaboration means to be able to work together, Rosnow discloses the method of providing the session which inter-communicateion with plurality of stations or clients, subsystems. Rosnow also discloses a way for user/client to create/edit projects and be able to view or interchange information between users/clients. Rosnow also discloses the method of entering or creating the project planning system which would presents to user stations and clients. Therefore, Rosnow satisfied the claimed limitation from the claim language.

Applicant also argued that Ostrowski and Brown were not disclose an active QFD session providing a common area operable for facilitating collaboration among session members via computer screens of said at least two client system. In response to Applicant's argument, the Patent Office maintains the rejection because Brown and Ostrowski in combination with Rosnow would discloses an active session providing a common ara operable for facilitating collaboration among session members vai computer screens of said at least tow clients systems .
